STEP 1

Click on Create

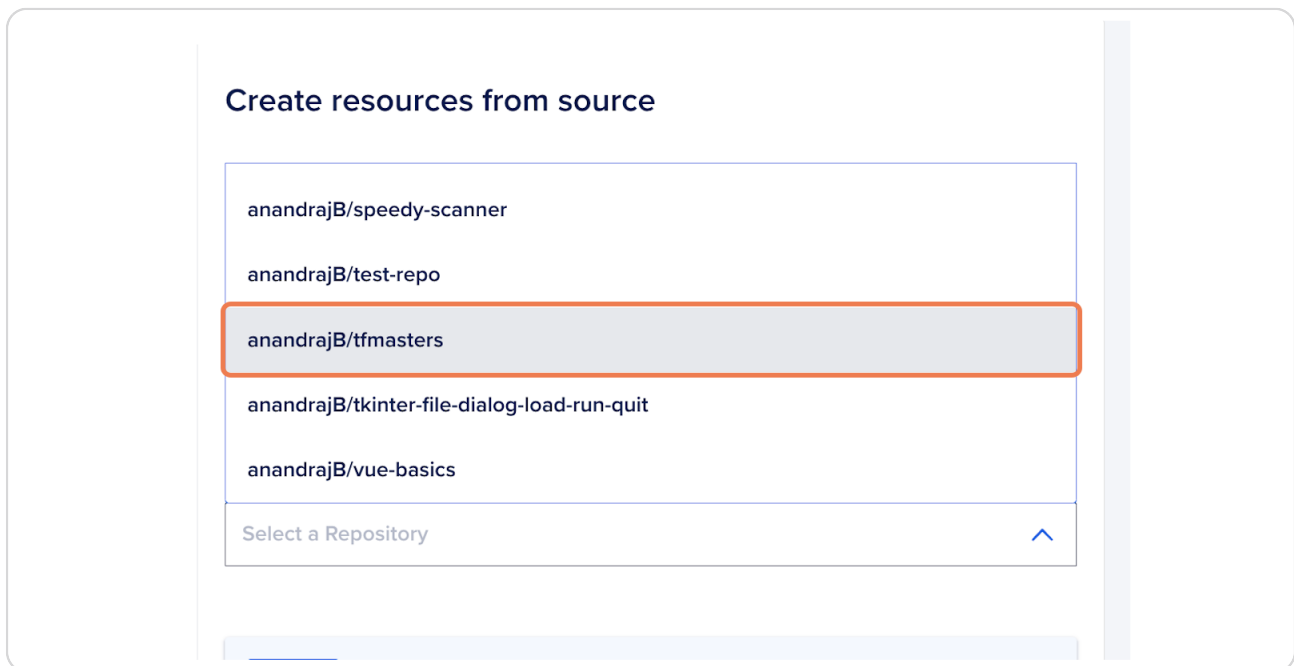

## STEP 2

Click on App Platform...

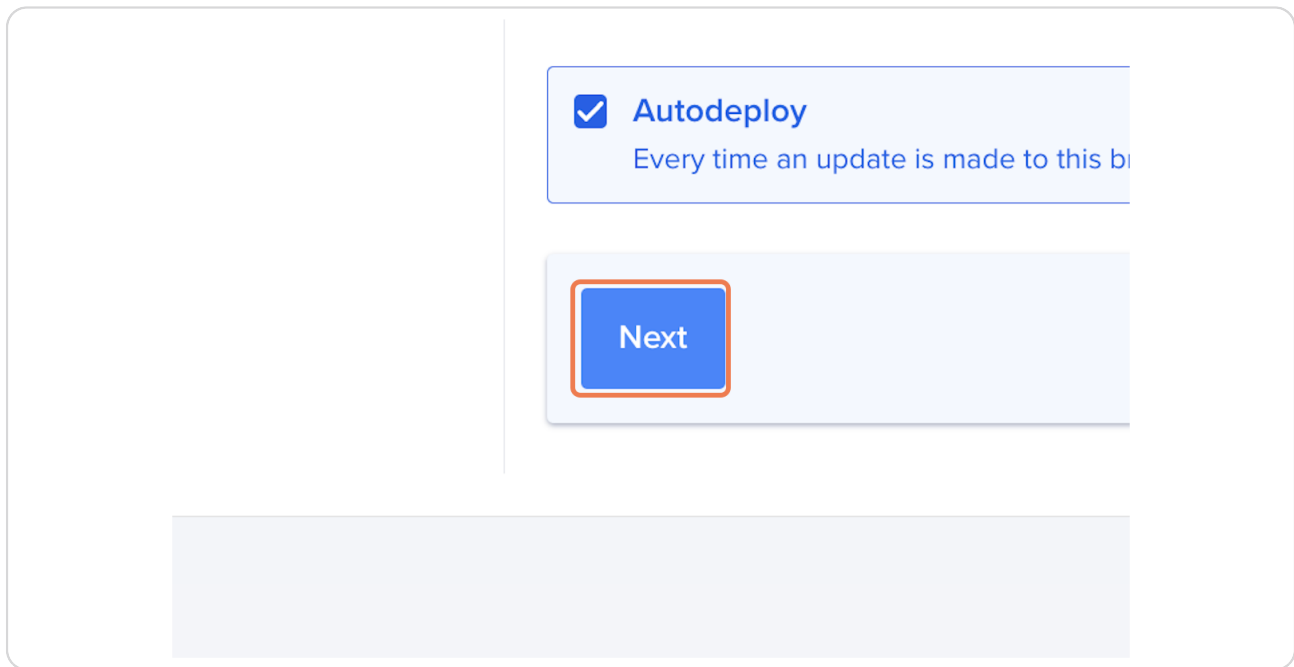

## STEP 3

Click on organization/repo\_name

#### STEP 4

Click on Next

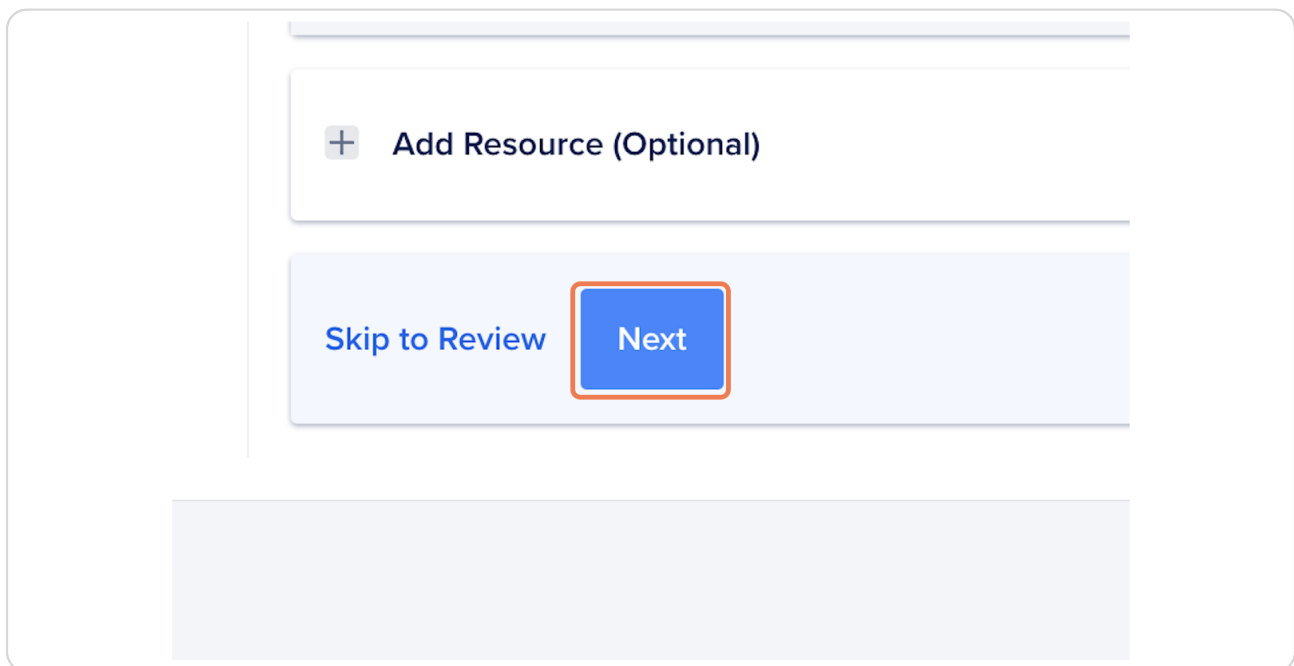

Autodeploy  
Every time an update is made to this b

Next

#### STEP 5

Customize the resource size and Click on Next

+ Add Resource (Optional)

Skip to Review Next

## STEP 6

Add any environmental variable if any and Click on Next

↳   tfmasters 0 environment variables

Back Next

## STEP 7

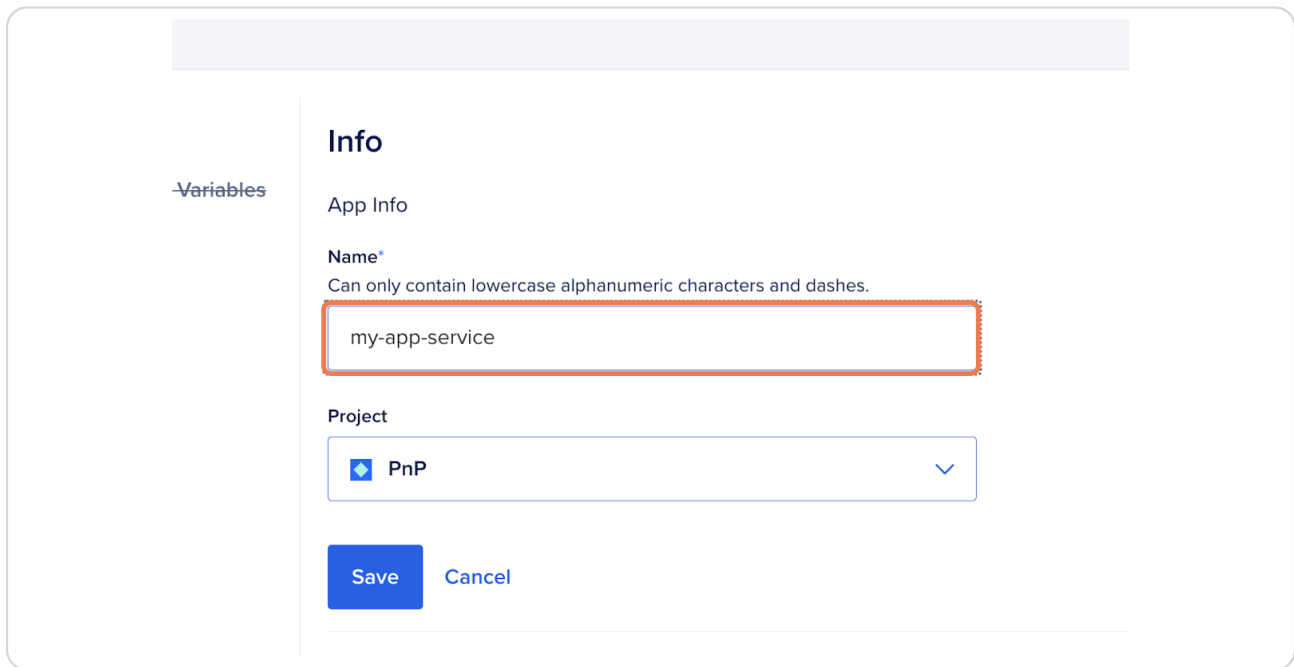

Click on Edit

Edit

Edit

## STEP 8

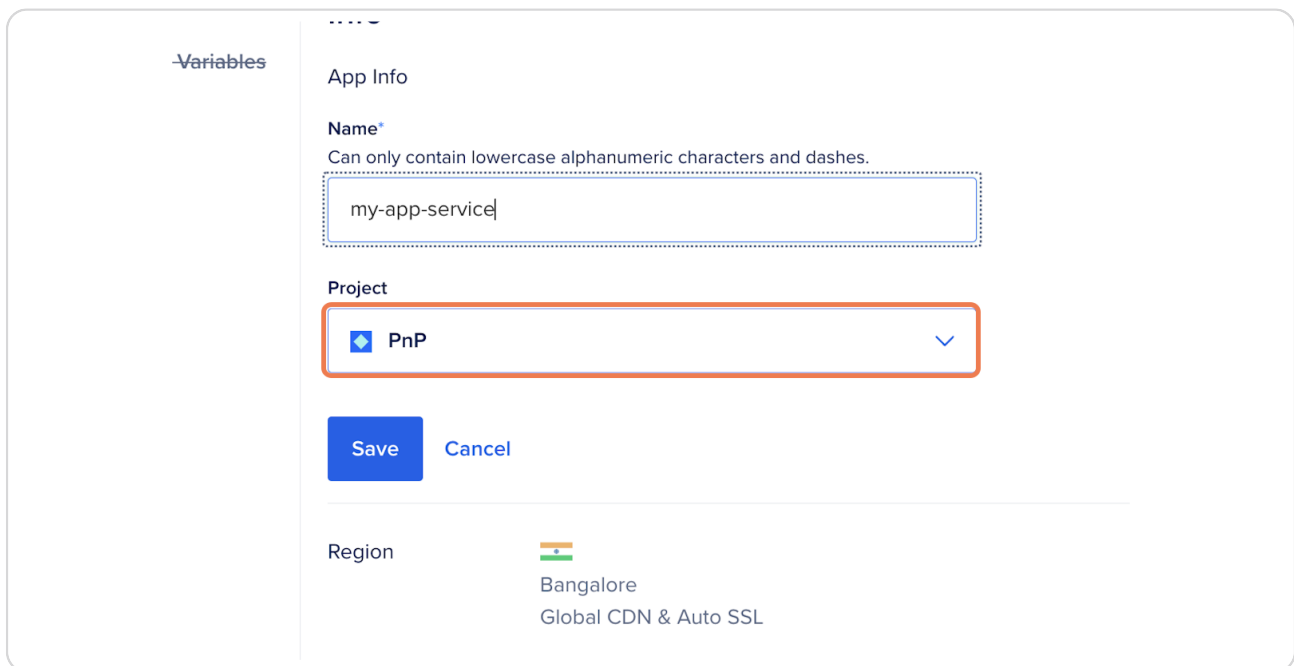

Edit the app name to your desired name example Type "my-app-service"

The screenshot shows the 'Info' tab in the Azure portal. On the left, there is a sidebar with a 'Variables' link. The main content area is titled 'App Info'. Under 'Name\*', there is a text input field containing 'my-app-service', which is highlighted with a red border. Below the name field, there is a 'Project' dropdown menu with 'PnP' selected. At the bottom, there are 'Save' and 'Cancel' buttons.

## STEP 9

Click on PnP

The screenshot shows the 'Info' tab in the Azure portal. The 'Name' field still contains 'my-app-service'. The 'Project' dropdown menu is now highlighted with a red border, showing 'PnP' as the selected option. Below the 'Project' dropdown, there are 'Save' and 'Cancel' buttons. At the bottom of the form, there is a 'Region' section with a flag icon and the text 'Bangalore' and 'Global CDN & Auto SSL'.

## STEP 10

### Find any project and select

**Name\***  
Can only contain lowercase alphanumeric characters and dashes.

my-app-service

**Project**

- PnP
- Krediq
